

600 BUILT IN OPEN FIREPLACE

R5,433.00

600mm Single sided traditional built in open fireplace to heat up areas of up to 60 m²

600 BUILT IN OPEN FIREPLACE | SINGLE SIDED

600 Built in open fireplace - Traditional single sided wood burning fireplace made of double skin 3mm mild steel in matt black finish.

Efficient and economical heating solution for South Africa's relatively short winter season.

Heat up your space quickly by way of convection and radiation. With convection the fireplace draws cold air from the bottom and releases hot air at the top of the fireplace. Radiation refers to heat that radiates from the hot fire as well as the heated metal surface of the fire box.

The 600 built in fireplace is suitable for new and existing installations - "600" refers to the build-in

opening size of the fireplace being 600 mm.

It is suitable for opening of 610mm to 650mm in width. Please refer to our technical drawing with dimensions that can be downloaded below.

This fireplace takes a Ø200mm stackable chimney pipe that is 1200mm in length.

Chimney pipes should be carried all the way to the roof top even if they run inside a bricked up chimney. This is to prevent thick soot from building up inside the walls.

A standard single story house usually requires 3-4 chimney pipes.

Kindly note, both the flue pipes and cowl are not included in the price of the fireplace - optional extras.

This fireplace is also available in a double sided version.

For larger living spaces please refer to our larger units :

- 750 mm (heating capacity up to 75 m²)
- 850 mm (heating capacity up to 85 m²)
- 1050 mm (heating capacity up to 110 m²)

Optional Extras

- Protective Fire screen @ **R790.00**
- Galvanized steel flue pipe (1 x Ø200mm x 1200mm) @ **R352.00**
- Standard rotating Cowl & Base : **R632.00**
- Fixed cowl / Turbo cowl : **R950.00**
